

How to Fasten Castor/Glide/Legs to a Bed Base

(no tools required)

1. Position base on its side

Carefully position the bed base on its side or in a position where you can safely access the underside.

2. Locate the ring stickers

Locate the places on the base where the castors fit that are pre-marked with white, ring shaped stickers.

3. Pierce base cloth in centre of ring sticker

If the base cloth is not already pierced in the centre of the ring sticker, pierce this by lining up the stem (threaded end) of the castor with the centre of the ring sticker and firmly pressing into place.

4. Screw in tight

Insert threaded end of the castor into the middle of the ring sticker and screw in firmly.

5. Repeat for each castor

6. Ensure all castors are used

7. Maintenance - check castors periodically

Castors must be checked 4-6 weeks after screwing in to ensure they remain tight and at 6 monthly intervals thereafter.

8. IMPORTANTLY

No responsibility will be accepted for damage caused by loose or ill fitted castors.

9. For solid floors

If your base is going on a solid floor we recommend either substituting castor fittings for glides, or using castor cups. There is no exchange on castors supplied, however glides can be ordered from your retailer.

If you have any questions or concerns about your bed, please contact the retail store from where it was purchased.
